Arterial hypertension

Contents

1. Definition 3
1.1 Etiology 3
2. Diagnostics 4

1. Definition
Hypertension is a persistent elevation of blood pressure.

1.1 Etiology
The cause is unknown in most cases.
Such cases are called primary hypertension.
Secondary forms are caused by renal disease
or by an endocrine or vascular disorder.

Long paragraph follows to make the splitter cut it by sentences.
First sentence of the long paragraph speaks about measurement.
Second sentence continues the thought about target values.
Third sentence mentions office and home blood pressure.

2. Diagnostics
Measure blood pressure on both arms at every visit.
Confirm the diagnosis with home monitoring.
